SUMMARY

I spent 9 months as a Java backend developer — the first 4 months on Java Core fundamentals and adapting to the team's Scrum workflow, then moving into Spring Boot work: integrating third-party APIs like KYC facial recognition, payment services, and inquiry services, and building a business-rule-triggered SMS notification system for a customer loyalty program. That role ended when the **war** disrupted the company. I love the JVM family as a whole. I'm also genuinely interested in AI — both developing fast without sacrificing depth of understanding,

PROFESSIONAL EXPERIENCE

Java Backend Development, Independent Projects 2026 – Present

Designing and building production-style backend systems independently (Spring Boot, CI/CD, containerization) and an building Agents.

Intern Java Backend Developer, https://taban-tech.ir/ 2025 – 2026 | Tehran, Iran

Learned Java Core fundamentals and adapted to the company's Agile/Scrum task workflow during the ramp-up period

Developed and integrated backend features using Spring and Spring Boot

Integrated third-party APIs, including KYC (facial recognition) verification and payment gateway services

Built inquiry / lookup services for various business use cases

Designed and implemented an SMS notification system for a customer loyalty program, triggered by rule-based business logic

SKILLS

Java
OOP, Collections, Exceptions Hanfling

Tooling
Git, Maven, Intellij, Apidog, Postman

AI
Claude Code, AI Development

SpringBoot
DI, IoC, REST APIs

Languages.
English - Advance

Data
SQL, PostgreSQL, JPA

Devops
Docker Basic, CI/CD basic, Ubuntu Server

INTERESTS & EXPLORING

Data Engineering
Deeply interested in the foundational concepts of data engineering, such as data modeling, warehousing, and building reliable data pipelines.

Java Software Engineering
Java software engineering, relational database design, and data modeling (PostgreSQL schemas, indexing). Long-term: data engineering.

AI agent development in Java
exploring LangChain4j and Spring AI to build agents with tool calling, memory, and integration into Spring Boot backends.
